

C L A I M S

What is claimed and desired to be secured by Letters Patent is as follows:

1. A wound dressing, which includes:
 - (a) wound covering means with a skin contact surface;
 - (b) means for releaseably attaching said wound covering means to a patient in covering relation over a wound;
 - (c) said wound covering means having an opening communicating with the skin contact surface thereof; and
 - (d) tube means fluidically communicating with said skin contact surface through said opening through a proximate end thereof and having a distal end.
2. The dressing according to Claim 1 wherein:
 - (a) said tube means extends through said covering means opening.
- a* ² 3. The dressing according to Claim ¹⁹¹ 2 wherein:
 - (a) said tube proximate end is connected to said covering means at said opening thereof.
4. The dressing according to Claim 1 wherein:
 - (a) said covering means includes an interior portion with said opening; and
 - (b) a perimeter portion surrounding said interior

a 3 19 1
8. The dressing according to Claim 4 wherein:
(a) said fastening means comprises adhesive on said skin contact surface at said perimeter portion.

a 4 19 1
9. The dressing according to Claim 3 wherein:
(a) said wound covering means comprises semi-permeable plastic.

a 5 19 1
10. The dressing according to Claim 4, which includes:
(a) an intermediate material layer adapted for placement between said cover means interior portion and said wound.

6 5
11. The dressing according to Claim 7 wherein:
(a) said intermediate material is hydrocolloid.

7 5
12. The dressing according to Claim 7 wherein:
(a) said intermediate material is nonabsorbant.

8 5
13. The dressing according to Claim 7 wherein:
(a) said intermediate material includes a fibrin coating adapted for contacting the wound.

a 10 19 1
14. The dressing according to Claim 1, which includes:
(a) means for closing said tube means distal end.

11 10
15. The dressing according to Claim 11 wherein:
(a) said tube closing means comprises a clip.

12
13. The dressing according to Claim 11, wherein said tube closing means comprises:

- (a) a needle vent adapted for puncturing by an injection needle and adapted for resealing after the withdrawal thereof.

13
14. The dressing according to Claim 11, which includes:
(a) suction means connected to said tube distal end.

14
15. The dressing according to Claim 11, wherein:
(a) said tube proximate end is closed; and
(b) said tube includes an opening in spaced proximity to its proximate end.

15
16. The dressing according to Claim 11, which includes:
(a) introduction means adapted for introducing liquid medication into said tube through its distal end.

9
17. The dressing according to Claim 7, wherein:
(a) said intermediate material includes a hydrocolloid and a nonabsorbant fabric sheet.

18. A method of dressing a wound surround by unwounded skin, which comprises the steps of:

- (a) applying a covering with a skin contact surface over the wound;
- (b) releaseably attaching said skin contact surface to said unwounded skin around said wound;
- (c) providing an opening in an interior portion of said cover material over said wound;
- (d) fluidically communicating a tube with said opening; and
- (e) fluidically communicating with said wound through said tube.
